

Low Fibre Diet

It has been recommended that you follow a low fibre diet by your Doctor or Dietitian. This leaflet will help guide you in making suitable food choices.

Fibre

Fibre (also known as roughage) is found in plant foods such as cereals, fruit and vegetables, nuts and seeds. A low fibre diet involves restricting your intake of these foods.

Aim to have 2 portions of fruit and 2 portions of vegetables, from the allowed lists below, and a glass of smooth fruit juice (125mls) daily. This is to help you meet your vitamin & mineral requirements. 1 portion of fruit/vegetables = 80g. If you are unable to meet this recommendation please consider taking a multivitamin and mineral supplement.

Fluid

It is important that you have an adequate fluid intake. Aim for at least 8-10 cups of fluid each day, from the allowed list below.

Choose decaffeinated drinks if you have loose stools or diarrhoea.
Choose sugar-free drinks if you have diabetes or need to lose weight.

For some people this diet may increase the risk of constipation, this risk can be reduced by ensuring you follow the advice regarding fluids and fruit & vegetables. If you do become constipated or are concerned about this, talk to your GP.

Foods to choose	Foods to avoid
