Canada Goose

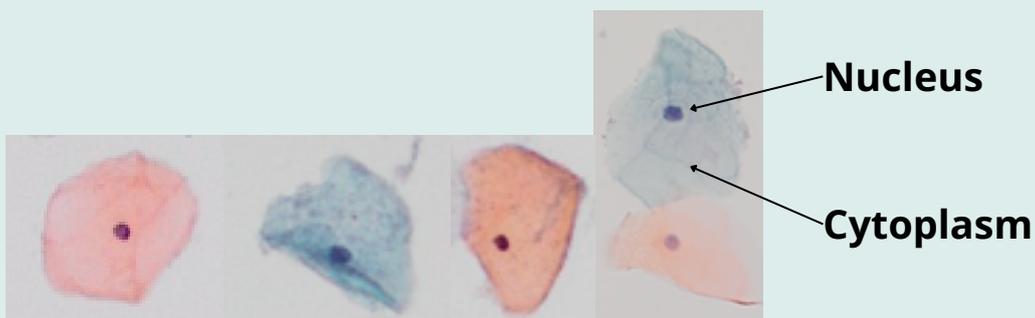

Scientific name: *Branta canadensis*

Introduced to the UK from North America
300 years ago.

[Learn more about the Canada Goose](#)

Can you spot these cells in the image of the goose?

There are two main types of cells that can be seen in a cervical screening sample. On the outside of the cervix there are squamous cells. These cells help to protect the cervix and are the same as the cells which make up your skin which protects your body from things like germs. This is what they look like under a microscope...

Find the next artwork on the trail to learn about other types of cells!

Together, we can eliminate cervical cancer.

The World Health Organization is aiming to end cervical cancer by 2040—but they can't do it without us. Attending your screening and getting the HPV vaccine are two powerful ways to help. Find out how you can be part of the solution:
